Projects

Here are the few apps and projects on which I have worked on

Campus.Net:

A social educational network developed for students which provides a connected online community for any campus , allowing each student to receive personalize campus news feeds , Questionnaire , Resume , placement, reviews , Blogs , Open Discussion Forum , E-Store etc. http://www.campus.net.in/

Web and Software Development Cell:

Developed a student portal where students can pay the fees, view attendance,results, book room, give their semester feedback, listen to college radio. Developed a faculty portal where admin can add assign faculty, allot courses to student, register student for new semester, take online attendance, upload results, view feedback students.

Wherzit :

The process of spotting and explaining the addresses to people has become a big challenge in current day scenario. It is quite difficult to locate and remember addresses in day to day life of people. Courier delivery, food items delivery, cab services etc. spends lots of money on phone calls to customers by delivery persons. Ambulances find it difficult to reach the exact location in time in case of any incident / medical urgency. Customers buy across various ecommerce platforms and in case if their address is changed, it becomes difficult to change

the address on all ecommerce platforms. As we move towards smart cities, there is a need to change the current day addressing system. We try to build an application that uses crowdsourcing as a main platform to gather data of users .Open maps and google maps are used as a backend service to find the addresses more easily than ever.   http://wherzit.pythonanywhere.com/

Lakshya Foundation :

NGO website http://www.thelakshyafoundation.org/

Welcome to Medaram :

Project by Telangana Govt.,India under which web and android app was built to help the people in finding the specific routes, parking places, emergency notifications etc for the biannual festival called "Medaram Jathra".

News : Link

Student Corner:

 Android app that is specially meant for the daily use of students which can make their lives easier than ever. Usually, the students set alarm to wake up in the morning, but usually they snooze it, so the app comes with a feature of setting of alarm with Snooze Mode and Math Mode (asks Math question). The alarm doesn't stop until the correct answer is given by the user. The next feature is setting Timetable, alert at the time of courses, Assignment submission remainder, to do task remainder. Most important fact is that app itself will change your device to silent mode when you're in classes so that your device won't make disturbances during class hours and application will put back the

device to normal state after the class hours, it will also store the number of bunks made by you for each course. You can also save notes.

Explode:

Mathematical logical windows game app similar to chain reaction in Android which got runner position in Microsoft code.fun.do 2013.
https://github.com/DevendraDora/Explode

Kinect Based Game:

Winner at Microsoft code.fun.do 2014. A Kinect based game that helps children to identify the right kind of food.
https://github.com/devendradora/Kinnect-Game

Map me:

Windows app that searches for the shops, hospitals etc. and gives the status of whether they are open or closed at real time using google map API.
https://github.com/DevendraDora/Map-me

Home automation:

A multi platform app which runs on android mobile , google glass and a web browser which can remotely control the home appliances. This app got first prize in Hackathon 2014.
https://github.com/DevendraDora/Home-Automation

Motor Vehicle Black Box:

Winner at Hackathon2014 .Developed a simulation of Hardware device which logs various critical events like gear shifts, break status, seat belt status ,

speed of the vehicle and sends the logs to the govt. setup server which may useful for controlling reckless driving , help users in case break failure ,accidents etc.

https://github.com/devendradora/MVBB-motor-vehicle-black-box

Hack it:

Windows app that fetches latest news about computers and technology , programming, hacking blogs

https://github.com/DevendraDora/Hack-it

Humancharacterguess:

Multiplatform app for Android, Firefox OS , windows and Firefox browser add on which predicts the character of a human being based on his date of birth.
Firefox Add-on

https://addons.mozilla.org/en-US/firefox/addon/humancharacterguess/
Android App

http://www.amazon.com/s/ref=nb_sb_noss?url=search-alias%3Dmobile-apps&field-keywords=humancharacterguess

Flip Chat:

Firefox browser add on that makes the text upside down and reverse the text entered by the user.

https://addons.mozilla.org/en-US/firefox/addon/fliptextchat
